

ABSTRACT OF THE DISCLOSURE

A method of fabricating a liquid crystal display panel having first and second substrates, the method includes the steps of forming first and second orientation films on the 5 first and second substrates, respectively, forming a seal material at edges of the first substrate, assembling the first and second substrates with each other, performing a first pressurizing and heating process on the first and second substrates to form a first cell gap, injecting a liquid 10 crystal material into the first cell gap, performing second pressurizing and heating process on the first and second substrates to form a second cell gap, and sealing the second cell gap.
